

**Automotive Noise & Vibration Congress
8th & 9th of November 2017
Conrad - Pune - India**

NVH has become a decisive asset of successful vehicle creation. This includes not only the elimination of unwanted noise like wind noise or engine, transmission and overall powertrain noise but also the creation of desirable sounds. Particularly with regard to the design and development of hybrid and electrical vehicles the engineering of a pleasant sound plays an important role.

We invite experts from automotive industries to share the latest technologies surrounding NVH and sound quality.

The following topics covering simulation, measurement and testing tools and methodologies will be the focus for the third Indian Automotive Noise & Vibration conference:

- Engine, Powertrain and Drivetrain NVH
- Powertrain Mounting System Analysis
- Heavy Vehicle and Vehicle Exterior
- Impact of downsizing on NVH
- Noise path analysis
- Car and truck pass-by noise
- Numerical Methods
- New developments in NVH simulation
- Experimental NVH analysis method
- Passive and Active NVH Contrai
- Vehicle sound quality and brand sound
- Commercial and Specialty Vehicles
- Aero-acoustic noise
- Tire and road noise
- NVH phenomena in hybrid and electric vehicles
- Powertrain Mounting Brackets Contribution to NVH Performance

DEADLINES

**Friday, 8th of September 2017
Abstract Submission**

**Friday, 15th of September 2017
Notifications of Authors**

**Friday, 20th of October 2017
Paper Submission**

Presentation Language: English.
Presentations are to last 20-25 minutes plus
subsequent discussion, 30 minutes total.

A related exhibition will provide the participants with simulation and testing solutions offered by the various suppliers completing the information around automotive noise and
